FOCUS

Urban Gardening: Managing the Risks of Contaminated Soil

Rebecca Kessler | A326

The urban decay of the middle and late twentieth century has given way to a gardening revival in cities around the globe. But urban soils are often heavily contaminated with metals, polycyclic aromatic hydrocarbons, and other contaminants, prompting questions about the health consequences of urban gardening—and some new solutions.

SPHERES OF INFLUENCE

Meeting the Needs of the People: Fish Consumption Rates in the Pacific Northwest

Wendee Nicole | A334

Many Native Americans consume much more fish and shellfish than average, exposing them to high levels of toxic chemicals that bioaccumulate in aquatic life. Pressure from tribal governments led by the Confederated Tribes of the Umatilla Indian Reservation culminated in Oregon enacting the nation's most protective state water quality standards in 2011, something tribes in the region—and the U.S. EPA—would like to see repeated throughout the Pacific Northwest.
